re: Proposed Industrial Park and Facility
Improvements
City of Menomonie
Dunn County, Wisconsin

Dear Ms. Sander:

The U.S. Fish and Wildlife Service (Service) has received your letter dated October 21, 2004, requesting comments on the subject project. The project entails construction of a street, storm and sanitary sewer, and watermain for a proposed industrial park located in Section 8, T28N, R12W, in the City of Menomonie, Dunn County, Wisconsin. Due to staff time constraints and priority work activities, we are primarily able to review your project for potential impacts to federally-listed threatened and endangered species or those proposed for listing. Be advised that other environmental concerns may be associated with this project such as wetland and stream impacts, erosion control needs, and effects on state-listed threatened or endangered species. If stream or wetland impacts will occur, state or federal permits may be needed. If resource impacts are expected to occur, we recommend that you forward this project to the appropriate Wisconsin Department of Natural Resources Office for their review.

Please provide us copies of any future documents that may be associated with this project or of future projects you may be planning that would require Service review. This will allow us to keep our files current. We will provide comments as time and work priorities allow. *Please note that for this and future projects, you should allow 30 days from the date of receipt for our office to review proposed projects.* While we make every effort to review projects as quickly as possible, our workload often precludes us from reviewing projects in much shorter timeframes. If you have not received comments within a requested shorter timeframe, please do not assume that we have no comments.

Federally-Listed Species, Candidate Species, and Critical Habitat

Our records indicate that the following federally-listed threatened or endangered species, candidate species, or critical habitats occur in Dunn County:

<u>Classification</u>	<u>Common Name</u>	<u>Scientific Name</u>	<u>Habitat</u>
threatened	bald eagle	<u>Haliaeetus leucocephalus</u>	breeding
endangered	Karner blue butterfly	<u>Lycaeides melissa samuelis</u>	prairie, oak savanna, and jack pine areas with wild lupine
candidate	sheepnose	<u>Plethobasus cyphus</u>	Chippewa River

Currently, there are no records of the Karner blue butterfly or sheepnose at or near the project site. There is an active bald eagle nest relatively near the project area, but our records show that it is located greater than ¼ mile from the proposed project and therefore would likely not be impacted by the proposed project. Please be aware that over time, habitats at or near the project site may be utilized by listed or proposed species not present at this time. Further, fish, wildlife or plant species occurring within the project area may become federally-listed as threatened or endangered or proposed for listing; it is also possible that critical habitat could be proposed or designated for a species. Therefore, if there is a time lag between plan completion and execution, it is important to reassess the impact of the project on federally-listed or proposed species or designated critical habitat prior to completion of the final project design and start of construction activities. In such instances, this office should be contacted for updated species and critical habitat information. Our species/critical habitat list is updated every 6 months.

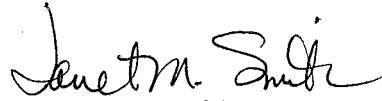

As this project involves a Federal action (i.e., funding), the U.S. Economic Development Administration (EDA), or its designated agent, is responsible for contacting the Service regarding that agency's determination as to whether the selected project alternative may affect federally-listed threatened or endangered species or adversely modify designated critical habitat. Section 7 of the Endangered Species Act of 1973, as amended (ESA), directs Federal agencies to consult with the Service on such matters. The Service would respond as to whether we concur with the determination of the EDA or its designated agent. If the proposed project may adversely affect federally-listed threatened or endangered species or adversely modify designated critical habitat, the EDA should initiate the formal consultation with the Service in accordance with section 7 of the ESA. Information on the section 7 consultation process can be obtained by contacting the staff person identified at the end of this letter.

Wetland Mitigation

In refining and selecting project alternatives, efforts should be made to select an alternative that does not adversely impact wetlands. If no other alternative is feasible and it is clearly demonstrated that project construction resulting in wetland disturbance or loss cannot be avoided, a wetland mitigation plan should be developed that identifies measures proposed to minimize adverse impacts and replace lost wetland habitat values and other wetland functions and values. Should the project require a permit under Section 404 of the Clean Water Act, we retain the option of commenting further on the application.

We appreciate the opportunity to respond. Questions pertaining to these comments can be directed to Ms. Leakhena Au at 920-866-1734.

Sincerely,

A handwritten signature in black ink, appearing to read "Janet M. Smith". The signature is fluid and cursive, with the first name "Janet" being the most prominent.

Janet M. Smith
Field Supervisor

REQUEST FOR SHPO COMMENT AND CONSULTATION ON A FEDERAL UNDERTAKING

Submit one copy with each undertaking for which our comment is requested. Please print or type. Return to:

Wisconsin Historical Society, Division of Historic Preservation, Office of Preservation Planning, 816 State Street, Madison, WI 53706

Please Check All Boxes and Include All of the Following Information, as Applicable:

I. GENERAL INFORMATION

- This is a new submittal.
- This is supplemental information relating to Case #: 04-1128/DN and title: Industrial Park Expansion
- This project is being undertaken pursuant to the terms and conditions of a programmatic or other interagency agreement. The title of the agreement is _____

- a. Federal Agency Jurisdiction (Agency providing funds, assistance, license, permit): Economic Development Administration
- b. Federal Agency Contact Person: Mohammad Saeed Phone: 912-353-7148 xt 144
- c. Project Contact Person: Wendy Sander Phone: 715-235-9081
- d. Return Address: 604 Wilson Avenue, Menomonie, WI 54751 Zip Code: 54751
- e. Email Address: wendy.sander@cedarcorp.com
- f. Project Name: Industrial Park Expansion
- g. Project Street Address: CTH B, Menomonie, WI 54751
- h. County: Dunn City: Menomonie Zip Code: 54751
- i. Project Location: Township 28N, Range 12W, E/W (circle one), Section 8, Quarter Sections NE 1/4 & SE 1/4
- j. Project Narrative Description—Attach Information as Necessary.
- k. Area of Potential Effect (APE). Attach Copy of U.S.G.S. 7.5 Minute Topographic Quadrangle Showing APE.

II. IDENTIFICATION OF HISTORIC PROPERTIES

- Historic Properties are located within the project APE per 36 CFR 800.4. Attach supporting materials.
- Historic Properties are not located within the project APE per 36 CFR 800.4. Attach supporting materials.

III. FINDINGS

- No historic properties will be affected (i.e., none is present or there are historic properties present but the project will have no effect upon them). Attach necessary documentation, as described at 36 CFR 800.11.
- The proposed undertaking will have no adverse effect on one or more historic properties located within the project APE under 36 CFR 800.5. Attach necessary documentation, as described at 36 CFR 800.11.
- The proposed undertaking will result in an adverse effect to one or more historic properties and the applicant, or other federally authorized representative, will consult with the SHPO and other consulting parties to resolve the adverse effect per 36 CFR 800.6. Attach necessary documentation, as described at 36 CFR 800.11, with a proposed plan to resolve adverse effect(s).

June 2005

ABSTRACT

On May 31 and June 1, 2005, a Phase I archaeological investigation was conducted in the area to be impacted by the proposed addition to the City of Menomonie Industrial Park, Dunn County, Wisconsin. Pedestrian survey of the project area resulted in the discovery of two archaeological sites. One site, 47-DN-401, is a concentration of historic and recent cultural and building material at the location of a former farmstead. The other site, 47-DN-402, is an isolated flake. Due to extensive disturbance at 47-DN-401 and the fact that 47-DN-402 is an isolated surface find, no additional archaeological investigation is recommended.

INTRODUCTION

The following report describes the results of a Phase I archaeological investigation of the area to be impacted by the proposed addition to the City of Menomonie Industrial Park, Dunn County, Wisconsin (Fig. 1). A total area of approximately 178 acres will be impacted by the project.

This investigation was commissioned by the City of Menomonie to determine whether any archaeological sites were located within the project limits. Dr. Robert J. Barth, Department of Geography and Anthropology, University of Wisconsin-Eau Claire, served as the Principal Investigator. Fieldwork in the project area was conducted on May 31 and June 1, 2005.

PHYSICAL SETTING

The project area is located in the S1/2, NE 1/4, and the SE1/4, Section 8, T28N, R12W (Fig. 2). It is bordered on the east by CTH B, on the west by the valley of the Red Cedar River, on the north by 708th Ave, and on the south by 650th Ave.

Like much of Dunn County, the project area lies within the Central Plain Geographical Province (Martin 1965, Paull and Paull 1977). This province is underlain by a weak Cambrian sandstone, which is covered in Dunn County by older (pre-Wisconsin) drift (Martin 1965). The entire province is characterized by relatively low relief, although local relief varies considerably (Martin 1965:320). Elevations within the project area range from 900 to 910 feet MSL.

Soils within the project area belong to the Dakota-Meridian-Shiffer association. This soil association, which is found on uplands, covers approximately 8% of the county (Wing 1975:4).

According to Finley (1976), the original vegetation cover of the project area consisted of a deciduous forest dominated by white oak, black oak, and burr oak. Due to over a century of agricultural activity, however, none of the original vegetation cover remains today. At the time of this investigation, the majority of the project area was planted in corn. A small portion of the project area was planted in beans.

Figure 1. Location of the Project in Wisconsin.

Figure 2. Map of the Project Area (adapted from U.S.G.S. Rusk, Wis. 7.5' Quadrangle).

ARCHAEOLOGICAL CONTEXT

The initial component of the investigation was a records and archives search, conducted to determine if any archaeological sites had been reported in, or adjacent to, the project area. Sources consulted included: the Archaeological Site Inventory (ASI), the Burial Sites Inventory, the Bibliography of Archaeological Reports, Charles E. Brown manuscripts, regional archaeology summaries (Barth 1984, 1987, 1991), regional histories (Andreas 1881, Forrester 1891), and county atlases and plat books (Rosholt 1888, Webb Publishing Company 1915, The Kenyon Company, Inc. 1927, Cloud Cartographics, Inc. 1996).

Examination of these sources revealed that no reported sites were located within the project area. The Cedar Falls Cemetery, 47-BDN-2, is located immediately west of the project area (Fig.2).

METHODS

Due to the excellent surface visibility in the project area, pedestrian survey was the sole investigation technique employed. Survey transects were spaced at a maximum interval of 15-meters. All cultural material collected was bagged by provenience and returned to the University of Wisconsin-Eau Claire for processing analysis and curation

RESULTS

Two archaeological sites, 47-DN-401 and 47-DN-402 were discovered during the course of the investigation:

The **Ronneberger site**, 47-DN-401, is a concentration of historic and recent material at the location of a former farmstead (Fig.3). The site, which covers approximately 2.2 acres, is located in the SW1/4, SW1/4, SE1/4, SE1/4 and the SE1/4, SE1/4, SW1/4, SE1/4, Section 8, T28N, R12W. J.F. Ronneberger purchased the S1/2, SE1/4, Section 8, T28N, R12W, in 1876, as part of a 240-acre parcel of land that also included the NE1/4, Section 17. Ronneberger was born in Germany in 1834 and immigrated to the United States in 1854, initially settling in Buffalo County, Wisconsin (Andreas 1881:289). While tax records indicate that this parcel had several previous owners, Ronneberger was apparently the first to establish residence on the property. The *History of Northern Wisconsin*, published five years after Ronneberger acquired the land, describes his farm as "relatively new" (Andreas 1881:289). A plat book published in 1888 indicates the

Figure 3. Location of 47-DN-401 and 47-DN-402.

presence of a house at the site location (Rosholt 1888). Tax records indicate that Ronneberger owned the property until 1904, after which M.A. Packer is listed as the owner. The Packer family remained in possession of the farm into the early 1990's, when the portion south of 650th Avenue became part of the existing Menomonie Industrial Park, and the 80 acres north of 650th Avenue were acquired by the Marshall Quilling Partnership (Cloud Cartographics, Inc. 1996). Despite the changes in ownership, various sources (Webb Publishing Company 1915, The Kenyon Company, Inc. 1927, the Wisconsin Land Economic Inventory 1938, Wing 1975, Cloud Cartographics, Inc. 1996) indicate the continued existence of a residence at the site location. According to Mr. Lowell Prange, City Administrator for the City of Menomonie (personal communication), the house that stood on the property when the City acquired the land was moved to a new location in 2004. This house was a ranch-style house, constructed in the 1960's or 1970's, however, and not the original Ronneberger residence. At the time the house was moved, a newer garage, a small barn, and another structure were taken down and the area was cleared and leveled.

Cultural material collected from the surface of the site included: one square glass bottle, one glass bottle neck and lip, one curved fragment of green glass, one curved fragment of clear glass, one threaded rim fragment from a glass jar, a ceramic cup handle, two ceramic sherds, and part of a brass container, labeled "The First National Bank Park Falls, Wisconsin." None of this material can be assigned specific dates, although much of it appears to date from the twentieth century.

Cultural material which was observed, but not collected, included: bricks and brick fragments, concrete fragments, a door hinge, asphalt shingle fragments, a section of a metal fence post, glass and ceramic fragments, sawed animal bone, boot/shoe soles, a baseball, and a whiffle ball. As is the case with the collected material, none of the observed material can be precisely dated. At least some of it, however, appears to be relatively recent in age.

The **Industrial Park site**, 47-DN-402, consists of an isolated quartz flake recovered in the NW1/4, NW1/4, NW1/4, SE1/4, Section 8, T28N, R12W (Fig.3).

In addition to the two sites, window and bottle glass fragments and ceramic sherds were observed throughout the project area. As they did not occur in concentrations, their presence is best interpreted as the result of periodic scattering of refuse in the fields.

EVALUATION

Documentary evidence, listed above, indicates that the Ronneberger site was definitely occupied for 116 years, and possibly for as long as 128 years. Because of this, the site is part of the history of farming in the Town of Red Cedar in Dunn County. Unfortunately,

the site has been very extensively disturbed by demolition and construction activities during the long sequence of occupation. No structures or foundations remain at the site and the house that was recently moved was built within the last forty years. No cultural material was recovered that could be definitely associated with the earlier periods of occupation. As was noted earlier, much of the observed material appears to be recent in age. As a result, the site no longer has the potential to yield significant information. The data from the Industrial Park site, when combined with data from other sites, can provide information about pre-contact utilization of the uplands along the Red Cedar River. As an isolated surface find, however, the site itself can yield no additional information beyond that already obtained.

RECOMMENDATIONS

The proposed expansion of the City of Menomonie Industrial Park will impact two archaeological sites. The Ronneberger site, however, is too extensively disturbed to yield significant information, and the Industrial Park site cannot yield additional information from the site itself. Consequently, no additional archaeological investigation is recommended. It is always possible, however, that buried remains within the project area may have escaped detection. If such buried remains are encountered during earth moving activity, work should be halted *immediately* and one of the following offices should be contacted:

If archaeological materials are encountered, the Office of the State Archaeologist, 608/264-6495, should be notified.

If human remains are encountered, consultation can be obtained from the Burial Sites Preservation Office at 1-800/342-7834 or 608/264-6503.

CURATION STATEMENT

The cultural material from 47-DN-401 and 47-DN-402, as well as project notes and a copy of the final report will be curated at the Archaeology Laboratory, 305 Schneider Social Science Hall, University of Wisconsin-Eau Claire.
